

Policy-constrained technology substitution under soft regional Li-access targets

Direct Hydro Pyro 2030 2040 2050 2030 2040 2050

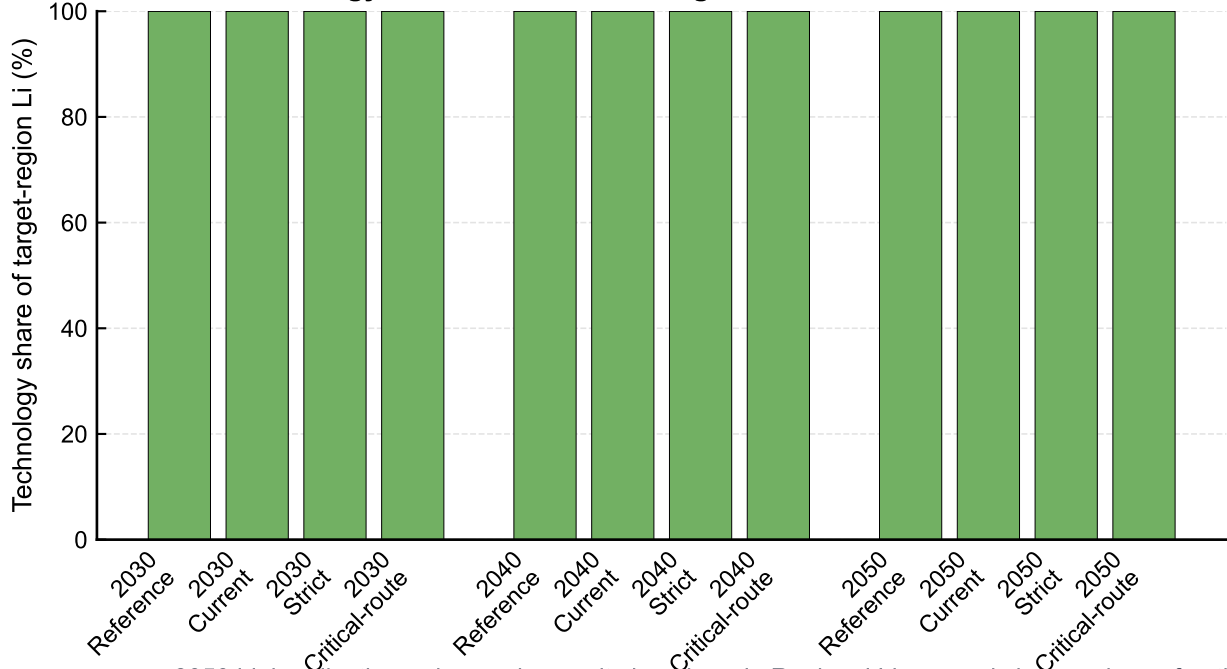

A. Direct substitution at 95% China access over time

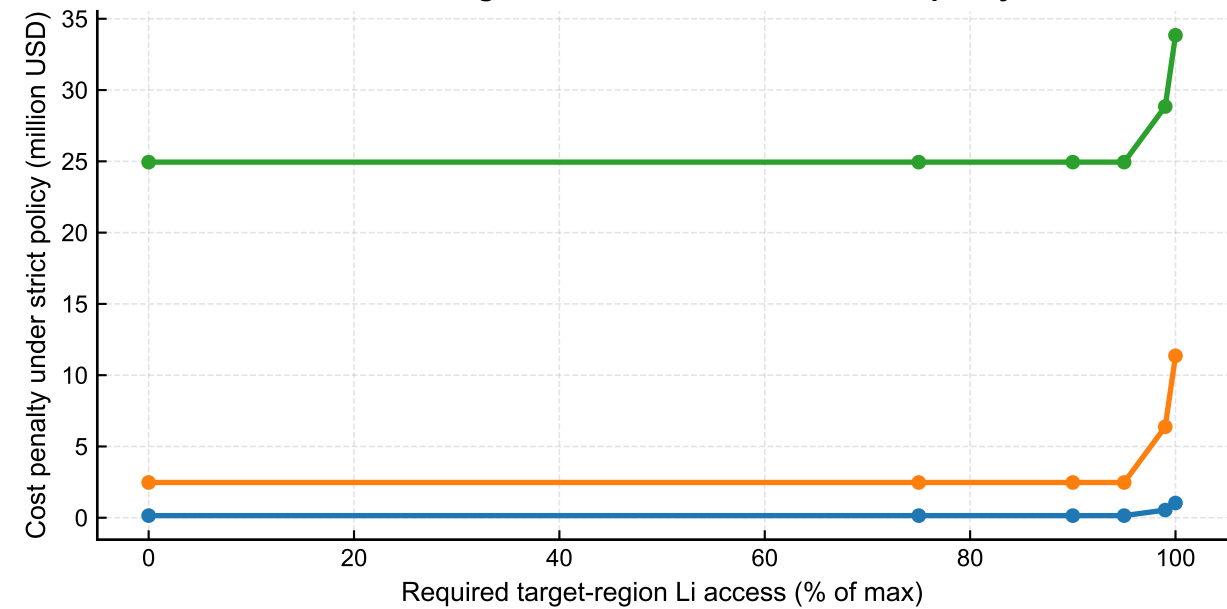

B. China Direct frontier over time (Strict)

C. China technology mix at 95% access target over time

D. Cost of China access targets rises over time under strict policy

2050 high-collection, advanced-capacity benchmark. Regional Li access is imposed as a fractional target, allowing the model to trade off Direct/Hydro/Pyro selection against cost and policy-constrained routes.
